

Keywords/Questions:

CSS - Cascading Styling Sheet. -

we can change, style, font, colour, size etc.,

There are three types

Eg `<html style="background: blue"></html>`

attribute value (property) value (value)

simply adding the styling content inside `</style><head>`

iii) $\delta x_{\text{total}} \Rightarrow$ the same internal CSS is

it can be accessed via html by using `<link>`

How CSS helps in styling something?

→ inline CSS ⇒ inside the specific tag.

→ internal CSS ⇒ inside the same file [html]

→ External CSS => creating a specific CSS file and accessing it using `<link>`.
