

Back-end :-

→ All behind the scenes ⇒ Applications, Databases, URI etc.,

What is Backend ?

→ Backend consist of three Major Components

- ① Server → Basically just a computer
- ② Application → All the logic enables the web app to function.
- ③ Database → where we can store & retrieve user data.

Server :-

- Just a computer
- server for a live website should be "on" for 24/7 so that it can listen for the incoming requests from browsers across all over the world.

Application :-

- Logic that runs on the server.
- how to respond to the request from the browser.
- It could send us the data / data code.

Database :-

- This is not a requirement of a web page.
- for storing user data.

Web App :-
