

The list elements: [ordered and unordered list]

Keywords/Questions:

Notes:

unordered list \Rightarrow `` ^{unordered list}
^{list item} ` Milk `
` Eggs `
` Flour `
``

unordered list create bullets. The order of items is not a matter, whereas ordered list create numerical or ordered values.

ordered list \Rightarrow ``
` Milk `
` Eggs `
` Flour `
``

there is also nesting and indentation.

- * nesting is @ just a list inside a list.
- * indentation is necessary because it makes easier to debug and understand.

Summary:

\Rightarrow ~~and~~ unordered list - create bullets - order of element doesn't matter.

\Rightarrow ordered list - create numbers, alphabets, roman etc., - in case the list must be in order.

\Rightarrow Nesting and indentation - importance.
